

## BITMAP MAGIC For Flexi 7.0 and PhotoPRINT 2.6 PART IV

*So you have a bitmap that you want to use in a customer proof...  
But you don't want or need to use the PhotoShop behemoth?  
Here are a few bitmap magic tricks you can do quite simply:*

**PROOF Mask A Bitmap:** You have a picture of a customer's existing sign, awning or vehicle, but you don't want the old ugly lettering to spoil your presentation to the customer...

☞☞ Import the image of the existing signage

*Figure 1*

☞☞ Scale the image to "life size"...resample the bitmap if necessary

☞☞ Draw RECTANGLES or FREEHAND DRAW shapes to cover the unwanted areas of the image with a "patch"

*Figure 2*

☞☞ Select one of the "patches", and click to activate the EYE DROPPER TOOL

☞☞ Click on the area of the bitmap next to the selected shape to fill that "patch" with the matching color

☞☞ Repeat to fill each "patch" with the color that best matches that area...Wow! It looks like the old lettering has been removed!

*Figure 3*

☞☞ Create your new proposed lettering and graphics, using the true scale of the image to guide you around problem areas like rivets, holes, ridges, etc.

*Figure 4*

☞☞ Select FILE ... TEMPLATES ... APPLY TEMPLATE and choose style JOB INFO 2 to make a professional proof for the customer to approve

*Figure 5*

*After approval, cut as normal, since all your measurements should be true to size!*
